## LETTER OF RECOMMENDATION

To Whom It May Concern,

I am pleased to recommend Mr. Kartavya Mahesh Suryawanshi for a **working-student (Werkstudent) or part-time position** in software development, data engineering, database management, or related technical roles. I have worked closely with Kartavya through **Foundyn**, an ongoing startup project at the Indian Institute of Technology Mandi, and through the **Design Practicum** and **Design Practicum II** courses completed under my guidance.

Kartavya achieved **10/10, the highest course grade**, in both Design Practicum and Design Practicum II, demonstrating excellent academic performance (**German grade 1.0, *sehr gut***) and a strong ability to turn open-ended requirements into practical solutions.

At Foundyn, Kartavya currently serves as a **Technical Lead**, where he has demonstrated strong hands-on software engineering skills and technical ownership. His work includes developing and integrating application components using technologies such as **React, Next.js, SQL, and database systems**. He is able to translate requirements into working solutions, investigate technical issues systematically, and take responsibility for the quality and reliability of the resulting system.

What distinguishes Kartavya is his ability to combine technical execution with an understanding of the broader product requirements. He works independently, learns new technologies quickly, and responds well to feedback while taking responsibility for delivering results in a fast-moving startup environment.

My experience in **entrepreneurship, startup incubation, finance, and investment-related activities** has given me the opportunity to work with students and early-stage innovators from both technical and practical perspectives. Based on my interactions with Kartavya, I consider him a motivated, dependable, and capable contributor with strong potential for professional software and data-oriented roles.

I therefore recommend Kartavya **without reservation** for a Werkstudent or part-time position in software engineering, backend development, data engineering, or database-related roles. I am confident that he will contribute with technical competence, adaptability, and a strong sense of responsibility.

Please feel free to contact me should you require any further information.

Sincerely,

**Dr. Satvasheel Ramesh Powar**

Associate Professor

Dean (Finance & Accounts), IIT Mandi

Indian Institute of Technology Mandi
